CEREALS IN ALASKA

Report of Investigations by the Department of Agriculture.

SUCCESS OF EXPERIMENT STATIONS

Results of Preliminary Survey of Interior of Territory.

COMPARISON WITH FINLAND

The fourth annual report of "Investigations in Alaska," under the direction of Secretary Wilson of the Department of Agriculture, and the superintendence of Mr. A. C. True, director of experiment sta-tions, has just been issued. The period covered by the report was the year 1900, and in part it is as follows:

The experiments with cereals and vegetables previously begun were continued at the Sitka and Kenai experiment stations with great success, and numerous co-operative experiments were inaugurated with almost uniformly good results. An extensive series of experiments was conducted at the Sitka experiment station illustrating the effect of fertilizers on new soil, as shown in the production of oats, barley and

Investigations at the Kenai station were in continuation of those inaugurated the previous season. Owing to a lack of drainage the fall-sown cereals were winter killed, but spring-sown barley and oats matured good crops and vegetables were re-ported of fine quality. Additional land has been cleared and prepared for cultivation at both the Sitka and Kenai experiment

One of the most important features of the work of the year was the preliminary survey of the interior of Alaska and the location of experiment station tracts at Rampart and Fort Yukon, in the valley of the Yukon river. Prof. Georgeson and Mr. Isaac Jones of the department traversed the Yukon country, starting from Dawson July 6, 1900, visiting all the more important villages along the river and investigating their possibilities as agricultural centers. As a result two tracts of land were surveyed, and their reservation for use in agricultural experiments has been arranged for. They consist of 106 acres at Fort Yukon and 313 acres at Rampart. These places seem to be best adapted to further investigation, and whatever results are achieved at these points will apply to most of the interior region. Mr. Jones remained at Rampart and has al-ready made preparations for beginning experiments with vegetables and cereals next season. For successful prosecution of the work in the interior, buildings, implements and other equipments will be needed

Construction of Buildings.

In the past year some advance has been made toward completing the station headquarters at Sitka, and work was begun upon the station building at Kenai, but the sum available for the purpose was so small that little was accomplished. The abnormally high prices of labor and cost of transportation made serious inroads upon the appropriation annually granted

for these investigations.

The services of a skilled horticulturist are needed at the Sitka station to aid in the introduction of new and valuable fruits and to improve the native varieties. The furnishing of a laboratory at this station is also necessary for the more accurate investigations contemplated, and additional buildings are needed at all the stations. It is thought desirable to begin investigations in dairying, and for the foundation of the herd animals will have to be pur-

Alaska is a large territory and of widely cessities stations have been established in regions which appear to be representative of large areas.

of large areas.

There is an estimated area of 100,000 square miles of land on which agricultural operations could be conducted. Conditions in Alaska are very similar to those of Finland, where there is a population of 2,500,000 and where 34,000,000 bushels of cereals are raised annually. The latest available statistics for Finland stated that there were that year in the country 4,000,-000 head of horses, cattle, sheep and swine, and dairy products to the amount of \$6,-750,000 were exported. 750,000 were exported.

It is believed that Alaska is as good a field for agriculture as Finland, if the

proper encouragement be given it. further believed that as the mineral and other resources of this country are developed a permanent population will be esveloped which will be an important aid to the successful maintenance of industries already yielding annual products valued at millions of dollars. It will doubt-less be found that many of the hardy cereals, as well as a great variety of vegetables, can be successfully grown in Alaska, and the experiment stations should be able to determine what varieties are best bers of live stock may also be maintained and dairying may be developed.

A fact of much importance from an agricultural standpoint is that cleared ground thaws out completely over much of Alaska every spring. As a matter of fact, the ground does not freeze deeply. The snowfall is so heavy—from four to eight feet—
that it becomes an effective protection to
the ground; but it is true only of cleared
ground and of places where the sun can reach the ground. Wherever vegetation covers the surface so as to keep the sun off, the ground remains frozen the year round. In the woods at Fort Yukon ice was found immediately beneath a layer of moss six inches thick. The spruce tops kept the sun off the moss and the moss preserved the ice as sawdust preserves it in an ice house.

Experimental Gardens.

There were several small but good gardens at Weare (Fort Gibbon) and neighborhood. The Alaska Commercial Company's agent had a fine garden of the usual hardy vegetables in front of his store, and at the military post there were two very creditable gardens near the bank of the river, where the drainage was good. They furnished lettuce, radishes, turnips, peas, etc.
For some hundreds of miles along the

lower Yukon the country is rolling and generally timbered. Much of it will make good farming land, and all of it affords more or less pasture. There are a number of Indian villages along this portion of the river. The Holy Cross Mission is perhaps the most important settlement. There is quite a large Indian village at this place and the Roman Catholic Church maintains a school and orphanage for the natives. This mission is not only famous for its good work among the natives, but also for its gardens. For several years the sisters of the mission have been noted for their success in gardening. It is really wonderful. Their cabbages, cauliflowers, potatoes, kale, carrots, etc., are equal to the best grown anywhere in the states. They raise grown anywhere in the states. They raise several hundred bushels of potatoes every year. Their gardens supply not only the needs of the mission dependent upon them, but also furnish many delicacies for pass-ing boats. They have the largest and best gardens which have been produced in the interior up to the present

interior up to the present.

No grain has been grown on the Lower Yukon up to the present time. If grain will mature there, a vast area, comprising many thousands of square miles, can be converted into farms. A contract has been made with the superintendent of Holy Cross Mission whereby he agreed to carry out certain experiments with wheat, barley, oats and buckwheat this year, the seed being supplied him. The careful work in gardening for which the mission is noted is a guaranty that the grain will be the grain will be the grain with both the mission is noted. is a guaranty that the grain will have a fair test.

Southward from the mouth of the Yukon Southward from the mouth of the Yukon the conditions are decidedly more favorable. Investigation developed that all the hardy garden vegetables can be grown successfully, and even early maturing varieties of grain may do well there. There is an immense area of fair pasture for cattle and sheen in this region and the state of the

SBURGIEBR Building Sale

Tomorrow the Reign of Bargains Will Be Bigger, Better and More Satisfactory Than Ever.

Our record-breaking building sale attracted the attention it deserved. We are indeed proud of the generous responses, and we will make greater efforts to sustain your enthusiasm. Better values will be brought forward. The power of this great building sale will be fed by making still greater price concessions. We append some of the numerous good things that will make up tomorrow's bargain list:

Building Sale of Handsome Silks.

Nothing can dim the luster of this extraordinary Silk Sale. It shall record an event that shall surpass all records-and outclass any previous sale. Here's an example for how little Silks can be yours. Shop in the forenoon, so as to find assortments intact.

That's the price we are asking for 75c. Lansburgh & Bro.,

It is not the fault of the climate if gardening is not successful in this region, but the

the found anywhere.

The whole coast region along Bering sea and the Alaska peninsula is entirely treeless. The hills are a beautiful green in summer, but not a tree can be discovered anywhere. anywhere.

anywhere.

Mr. James C. Blaine, United States marshal at Unalaska, and Rev. Dr. Newhall, superintendent of the Jesse Lee Home at Unalaska, have imported several hundred forest trees of many kinds from Vancouver Island. Many of them failed to grow, as might be expected from the length of time great on the journey in addition to below

One Reason Why They Generally Turn From the London Express.

politicians more than the fact that the recent duel between Count Boni de Castellane and M. de Rodays resulted in the latter being wounded.

To the uninitiated it may seem odd that duels fought with deadly firearms should so rarely result in injuries to the combatants; but the explanation is really simple enough, for all who have any acquaintance with French dueling as practiced today are well aware that the bullets are faked in nine cases out of ten.

These bullets are made of mercury and These bullets are made of mercury and lead, which in weight and general appearance are almost perfect counterfeits of the ordinary missiles, except for a slightly silver shade and greasy touch. Though heavy and solid looking, the first blow of the ramord pulverizes them. All sorts of precautions are supposed to be taken against this kind of deception. Of course, where modern revolvers are used it is not easy to avoid danger, but in many duels muzzle-loading

ating all risk.

Indeed, it is not unusual for seconds to

agree on some celebrated "armurier" who shall furnish a sealed box of weapons containing two pistols sealed and certified, and a number of similarly certified charges of powder and bullets. Trickery would there-fore seem impossible,

In spite, however, of all these precau-tions, the benevolent fraud goes on. There are usually four seconds — two for each combatant. As it is easier for two men to come to an understanding than four, the pair that have agreed to prevent bloodshed manage to take charge of the loading, while their confreres are listening to the last nervous recommendations of the prin cipals.
Of course, as in the recent Boni-Rodays

to hear you are having trouble with your cook, Mrs. Upjohn."
